TABLE OF CONTENTS

1   Introduction

The agile product backlog in Scrum is a prioritized features list, containing short descriptions of all functionalities desired in the product. When applying Scrum, it's not necessary to start a project with a lengthy, upfront effort to document all requirements. Typically, a Scrum team and its product owner begin by writing down everything they can think of for agile backlog prioritization. This agile product backlog is almost always more than enough for a first sprint. The Scrum product backlog is then allowed to grow and change as more is learned about the product.

1.1 Purpose

Provide a prioritized features list, containing a short description of all functionalities desired in the product.

Lists everything that the product owner and Scrum team feels should be includedin the software they are developing.

1.2 Scope

- Lists the user's role.

- Write all the user's requirements.

- Lists some main functions of the system.

- Short description of all the functionality desired in the product.

- Given the priority of each feature and function of the product.

PB29	Evaluate Suitable CV	Employer	H
PB30	Interview schedule	Candidate	M

2.2   Product Backlog Specification

Priority and Estimates

Priorities are set from high (H), medium (M) and low (L):

Priorities of some user stories can be the same with others.

If a user story has dependencies, it must have lower priority than its dependencies.

VERSION 1: Smart Recruitment System

ID	Theme	As a	I want to	So That	Priority	Estimate (hour)
PB01	Chat with Chatbot on the web application	Admin	Chat with Chatbot	I can control answer of chatbot	H	4

PB02	Dashboard view	Admin	Access a dashboard view of activity	I can monitor system-wide performance	H	8
